No. 2700

Sliding Folding Garage Door Hardware

Sliding Folding Garage Door Hardware is used to advantage where the opening is continuous the entire length or breadth of building and can be used for 3, 4, 5, or 6 door openings, any combination of these openings or multiples of same. This arrangement gives a weather-proof fit in the same manner as a swinging house door. Doors should not exceed three feet in width. Track length for each unit should be two times the width of one door plus eight inches. Track can be adjusted in brackets so that doors can swing to any angle desired.

Aurora Door Hanger

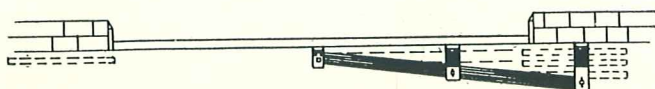

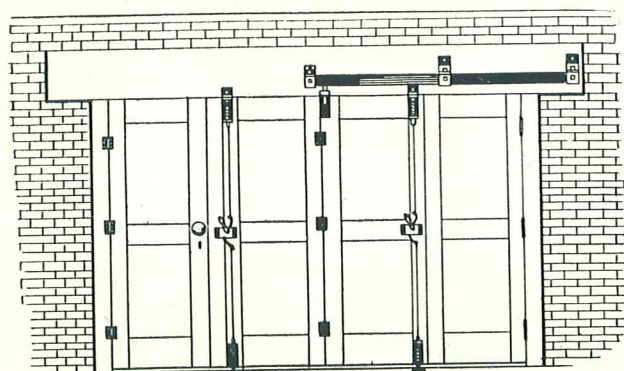

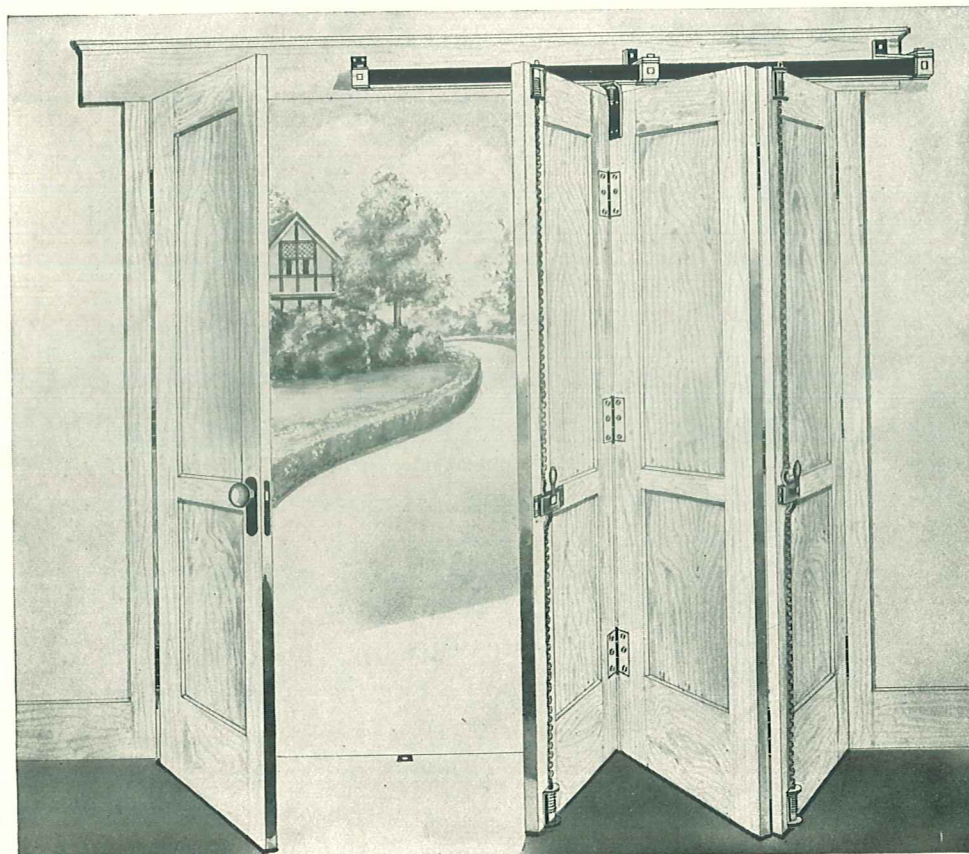

& Specialty Company

No. 2700

Sliding Folding Garage Door Hardware

The above illustration features a four door sliding-folding outfit, best adapted to an 8 to 12 ft. opening. It consists of 3 doors hinged together and attached to side jamb, when open the doors can be folded clear of the opening. The fourth door is hinged to opposite jamb and is used as service door.

This type of hardware permits the use of smaller doors in the opening thereby giving more clearance for the car.

LIST PRICE

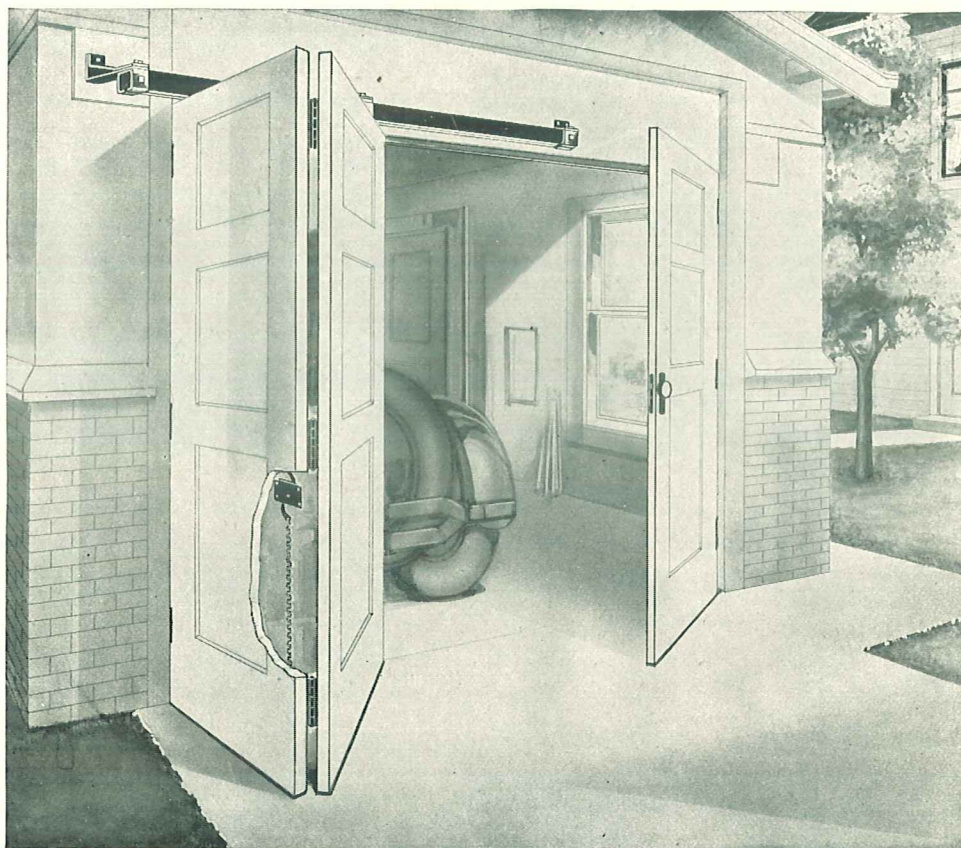

No. 2700-4 Door Set Complete (1 Trk) . . \$20.00

This Hardware is made in 3 weights for Nos. 2, 3 or 4 Track.

No. 2600

Sliding Folding Garage Door Hardware

For Doors Opening Out

The above illustration features a three-door sliding-folding outfit with doors operating out. This conveys an idea which can be applied to any one of the No. 2700 combinations, and is recommended, when lack of space prohibits operating the doors inside.

Up and Down Bolt

Easily operated. Can be used on any swinging door. Has Center interlocking device Malleable Iron Plungers. Keepers furnished are for Flush Doors. Special keepers furnished to suit conditions at small extra charge.

DIRECTIONS FOR INSTALLING

Fasten Bolt cages to top and bottom of doors and interlocking device in center. Place interlocking device in open position and the top and bottom plungers in keepers and connect with chain.

List price\$3.00

No. 512

Up and Down Bolt

Made in one size for doors swinging either in or out, and can be used for doors of any height. Packed in a small package with all screws and necessary parts. Has perfect interlocking device, which when released will act as door holder. Chain is used for the adjustment of bolt to various heights of doors. When the interlocking device is released, bolts shoot into position at both top and bottom, and the door is positively locked. Two top keepers furnished with bolt for doors swinging either in or out. Special keepers can be furnished to meet conditions for a slight extra charge. Keepers furnished regularly are for flush doors.

DIRECTIONS FOR INSTALLING

First fasten bolt and interlocking device to door, then place interlocking device in open position, and the top and bottom plungers in the top and bottom keepers. Chain is fastened by S hook. For any further adjustment use thumb bolts in plungers where $\frac{3}{4}$ " adjustment is provided for.

Packed one complete in box.
